- Dill
- Chives
- Nasturtium
- Lemon Verbena
- Catnip
- Spearmint

Specialty Garden

Grow several varieties of one plant (greens, basils, peppers, mints, etc.)

Salad Garden

- Radish
- Carrot
- Lettuce
- Tomato

Pizza Garden

- Pepper
- Parsley
- Tomato
- Oregano

Salsa Garden – is about the same as a pizza garden, except instead of parsley and oregano, plant cilantro and bunching onions.

Stirfry Garden

- Bok choy
- Green onion
- Kohlrabi
- Pepper
- Eggplant
- Kale

Plant what you like to eat!

For maximum success, also plant the right plant in the right season (see reverse).

Plant	When to plant	How many plants per EarthBox?	Notes
Beets	October - March	6	Start from seeds
Bok Choy (Chinese cabbage)	October - January	6	Start from seeds or transplants
Broccoli	October - January	6	Start from seeds or transplants
Cabbage	October - January	6	Start from seeds or transplants
Carrots	September - March	16	Start from seeds
Cauliflower	September - January	6	Start from seeds or transplants
Collards	February - November	6	Start from seeds or transplants
Cucumbers	September - March	4	Need to climb. Start from seeds or transplants
Eggplant	June - August	2	Start from seeds or transplants
Kale	September - March	6	Start from seeds or transplants
Kohlrabi	September - March	8	Start from seeds or transplants
Lettuce	September - January	8	Start from seeds
Mustard greens	September - March	6	Start from seeds or transplants
Peppers	August - April	6	Start from seeds or transplants
Radishes	October - April	16	Start from seeds
Squash	September - October; January - March	2	Start from seeds or transplants
Strawberries	October - mid-November	6	Grow from transplants. Plant 'Sweet Charlie' or 'Festival'
Swiss Chard	September - March	6	Start from seeds
Tomatoes	August - March	2	Start from seeds or transplants. Some varieties need support

Most herbs that you might want to plant can be grown from seed or transplant with a few exceptions. Members of the carrot family like dill, fennel, parsley, and cilantro have a large tap root and do not easily survive transplanting. Therefore, those herbs should be grown in place from seed. Herbs in the carrot family should also be planted at the same time of year as carrots - they do not tolerate heat well.
